Growth & Early-Cycle

1 · DUAL SCORING BY MARKET MATURITY

YIELD & STABILITY

>60% of all-time transactions are ready/secondary. Established districts with rental benchmarks and multi-year price history. Mirrors MSCI/IPD total-return logic.
e.g. Khalifa City, Al Reem Island

GROWTH & EARLY-CYCLE

<40% of all-time transactions are ready — predominantly off-plan. Mirrors CBRE/PGIM emerging-market logic: demand velocity, developer confidence, forward appreciation.
e.g. Al Hidayriyyat, Al Jubail Island

2 · YIELD & STABILITY — FACTOR WEIGHTS

Price Momentum (ready only)	30 pts	• Statistical explanation: % change in median AED/sqft for ready/resale transactions, last 12m vs prior 12m. Off-plan excluded. • Plain English: Are prices going up? Compares price per sqft this year vs last year for completed homes. Bigger rise = more points.
Gross Rental Yield	25 pts	• Statistical explanation: Median ADREC-registered annual rent ÷ median sale price. >8% → 25 pts; 6–8% → 22; 4–6% → 16; 2–4% → 8. • Plain English: How much rent does a landlord earn vs what they paid? Higher rent relative to purchase price = more points.
Liquidity	20 pts	• Statistical explanation: Transactions last 3m ÷ avg 3m over prior 9m. Log-scaled to prevent outliers dominating. • Plain English: How easy is it to buy or sell? More sales recently vs the past = an active, healthy market.
Price Stability	15 pts	• Statistical explanation: Inverse CoV of quarterly median PSF over 24m — lower variance scores higher. CoV ≤0.05 → 15 pts; >0.30 • Plain English: Are prices steady or all over the place? Consistent prices over 2 years score higher — wild swings score lower.
Appreciation Signal	10 pts	• Statistical explanation: Ready median PSF ÷ off-plan median PSF (last 12m). Ratio >1 = completed units trade above off-plan entry. • Plain English: Do finished homes sell for more than off-plan? If yes, the area has proven its value over time.

3 · GROWTH & EARLY-CYCLE — FACTOR WEIGHTS

Off-Plan Velocity	30 pts	• Statistical explanation: Off-plan transaction count last 6m vs prior 6m. Accelerating ratio = developer launches finding • Plain English: Are developers selling faster? More off-plan sales recently vs 6 months ago = strong buyer demand.
Off-Plan Momentum	25 pts	• Statistical explanation: % change in off-plan median PSF, last 12m vs prior 12m. Capped ±40%. • Plain English: Are new-launch prices rising? Compares off-plan price per sqft this year vs last year.
Appreciation Signal	20 pts	• Statistical explanation: Same ready/off-plan PSF ratio as Y&S, weighted higher (20 vs 10 pts) in early-cycle markets. • Plain English: Do finished homes sell above their off-plan price? Rarer in new areas, so it carries more weight here.
Developer Activity	15 pts	• Statistical explanation: Unique projects with off-plan registrations last 12m vs prior 12m. Ratio ≥1.5 → 15 pts. • Plain English: Are more developers launching projects? More unique projects vs last year = a growing, competitive market.
Market Entry Momentum	10 pts	• Statistical explanation: Off-plan transactions last 3m vs rolling 3m avg over prior 9m. Ratio ≥1.5 → 10 pts. • Plain English: Is buying picking up right now? More sales in the last 3 months vs the usual pace = momentum building.
